

The state after the move

New workshop provides enough space for each assembly worker

Created zones for materials and intermediate products to ensure the orderly storage

Enough space for assembly allows worker to design a revision of the space. It continues in this area to further improvements.

Plenty of space for storage makes the manipulation easier for incoming goods, and it brings more clarity and adherence to FIFO.

We are able to quickly and adherence to all standards of the mounting surface to expand and therefore to increase the capacity of the assembly without lowering quality standards.

New built office for masters for bringing more convenience and clarity, not only for administrative tasks but also for testing of finished product.

In building our new workshop, we worked closely with our customer to get an optimal layout design. Here we focused on the creation of new, larger warehouse and assembly areas and space for testing. The work was designed to ergonomics and space required for the assembly workers. We also followed the initial inquiry about the possibility of extending the operational workshop.....

Our goal is by working closely with our clients at all levels of the profit increase of both parties. This affects not only the assembly, but the entire production. In our manufacturing facilities, such as for example Plastic injection molding, stamping shop, powder coating, Screen printing and so on We have now reached a high standard of production. VJBPARTNER focuses on high quality, short delivery times and low production costs. we respond flexibly to changing customer requirements and by mutual agreement, we implement it into production. Only close cooperation with our customers leads to mutual Satisfaction.
